TEACHING LISTENING BY USING BOTTOM-UP STRATEGY (AN EXPERIMENTAL STUDY AT SMPN 1 BAITUSSALAM ACEH BESAR)

ABSTRACT

Abstract

Name : Cut Mailisa Hasriyanti

Student Number : 1006102020075

Study Program : English Education

Title : TEACHING LISTENING BY USING BOTTOM-UP STRATEGY

(An Experimental Study at SMPN 1 Baitussalam Aceh Besar)

Key words : Bottom-up Strategy, Listening

This study is intended to find out whether the use of bottom-up strategy improve studentsâ€™ listening achievement or not. The writer conducted an experimental research in SMPN 1 Baitussalam Aceh Besar. In this study, the writer used one group pretest-posttest design. The pre test was given before experimental action in order to know the studentsâ€™ achievement before the treatment. In addition, the post test was given to know the studentsâ€™ achievement after the treatment. In order to find the differences between pre test and post test achievement, the writer used t-score. The result shows that the mean score of the pre test is 41.8 and the score of the post test is 78.2 and the result of t-score is 10.3. The t-Value at the level significant 0.05 is 2.120 and at the level of significant 0.01 is 2.921 with the degree of freedom 16. Since, the result of t-test is higher than t-Value, the alternate hypothesis is accepted. In other words, there is a significant difference between the pre test and the post test score. It proves that the use bottom up strategy is effective to improve studentsâ€™ listening achievement.
